```

Nomor 1.b

The image shows a Python 3.8.2 Shell window on the left and a code editor window on the right. The shell window displays the execution of a script named `Modul_3.py`. The script prompts the user for a matrix size `n` and then checks if the matrix is consistent. For `n=1`, it prints "matriks konsisten" three times. For `n=2`, it prints "semua isi matriks adalah angka" three times. The code editor shows the implementation of the `cekKonsisten` function, which iterates through the matrix elements and checks if they are all integers. It also includes a `cekInt` function to check if a single element is an integer.

Nomor 1.c

The image shows a Python 3.8.2 Shell window on the left and a code editor window on the right. The shell window displays the execution of a script named `Modul_3.py`. The script prompts the user for two matrix sizes `n` and `m`, and then checks if they can be multiplied. For `n=2` and `m=2`, it prints "mempunyai ordo 2x2". For `n=3` and `m=2`, it prints "mempunyai ordo 3x2". For `n=2` and `m=3`, it prints "mempunyai ordo 2x3". For `n=3` and `m=3`, it prints "ukuran sama". The code editor shows the implementation of the `cekInt` function, the `ordo` function, and the `jumlah` function, which multiplies two matrices.
